

**KATS™ ADVANCED  
TECHNOLOGY READY  
FOR WINDOWS VISTA™**

KATS Generation 4™ is more than just a simple upgrade to the popular Generation 3 system. The new Generation 4 package has an entirely new architecture, including a new Graphical User Interface ("GUI") designed to make the system easier to navigate and more functional. The challenge was to develop this new GUI while at the same time not changing the overall feel of KATS™. This allows Generation 3 users to move into the Generation 4 version without having a new learning curve. KATS 4 will function on current versions of Windows™ software, and has also been developed to operate on the new Windows VISTA™ products.

**PURCHASING GUIDE**

When trying to decide which system is best suited for your agency it is important to know that we license our software on the number of dog teams your agency has. (One officer with one dog is considered a single dog team.) There is no limit as to the number of computers the system can be networked to or installed on as long as you have a license for each dog team. To help you understand how the system operates, we have developed an online purchasing guide in our Online Store at [www.kats.ca](http://www.kats.ca).

**TAKE US FOR A DRIVE!**

New to KATS™? Why not take us for a test drive? Download a free trial version of Generation 4 from our web site. There is no better way to determine whether KATS™ is right for you.

EDEN CONSULTING GROUP

ANNOUNCING

**KATS™  
GENERATION 4**

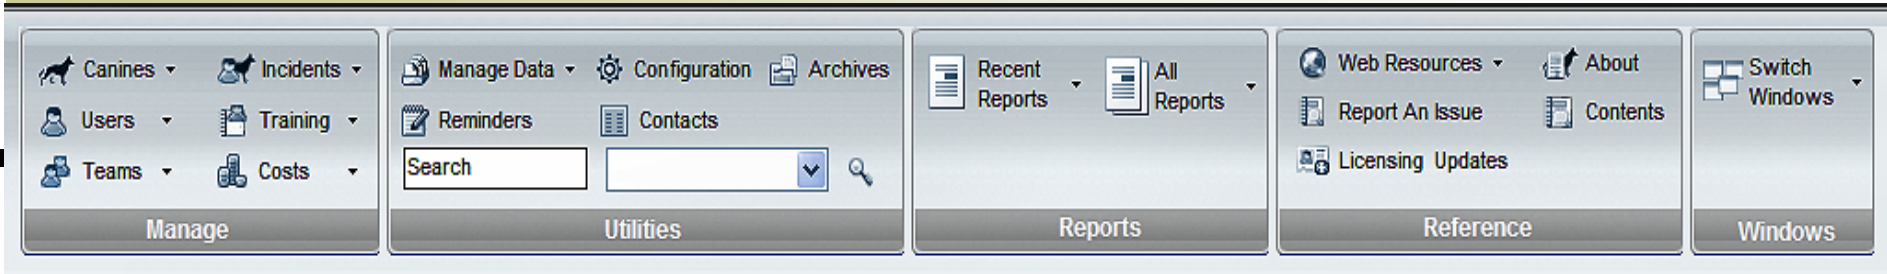

**K9 Activity Tracking System™  
Law Enforcement Software**

**EDEN CONSULTING GROUP**  
*Leading the K9 Software  
Industry Standard Since 1995*

# KATS™ ADVANCED TECHNOLOGY—READY FOR WINDOWS VISTA™

Once again KATS™ has been re-engineered from the ground up by a Microsoft® Gold Certified Partner programming team adding hundreds of enhancements, improved navigation, and a new streamlined input that significantly reduces your mouse clicks from previous versions. KATS™ Generation 4 is operational on current versions of Windows® operating systems, and is also Windows Vista™ ready, developed using Windows Visual Studio™.

## WHAT IS KATS™?

The K9 Activity Tracking System™ is a database software system that is engineered by a Microsoft® Certified Gold Partner programming team to be deployed in the patrol cars and/or offices of law enforcement, military and SAR dog teams. The system is fully networkable and designed to be mobile with the ability to easily update your office systems.

Eden Consulting Group conceived the first ever K9 record keeping database in 1995 and has continued to re-develop and enhance the system to keep up with modern law enforcement training, techniques and case law. KATS™ Generation 4 has been developed based on feedback from our users, along with recommendations from our trainers and by staying abreast of the latest in training techniques and frequently changing case law.

Pure and simple, KATS™ was the first software ever developed for K9 policing and continues to pioneer the industry standard. KATS™ Generation 4 is now easier to manage, easier to use and more powerful than any of our previous versions and the most powerful K9 database available in the world today.

## LIABILITY PROTECTION!

The K9 Activity Tracking System™ is cutting edge technology that protects you and your agency from liability. New features and an entirely new report system provide you with court ready documentation or presentations to management on the status of your entire unit with a few simple keystrokes.

This record keeping ability is critical in liability protection. Good record keeping helps to maintain your agency integrity and provides protection to those managers who have a vested interest in vicarious liability issues. KATS™ functionality is created by police officers and tested by K9 teams with extensive street experience keeping that philosophy in mind. As the system is engineered and tested, KATS Generation 4™ is scrutinized by our legal team to ensure no case law issues are raised and the information you need to protect yourself and your agency is complete.
